

'REGAIN & MAINTAIN WELLHEAD GATE VALVE INTEGRITY'

RS Clare's high performance valve lubricants are used in many of the world's major Oil & Gas fields and are field proven to deliver cost-effective integrity improvement measures:

- Prevent the loss of valve integrity, when filled into a new valve during manufacture
- Regain valve integrity, sealing leaking valves under full wellhead pressure
- Maintain valve integrity over extended maintenance periods

Products

'Valve Lubricant 601' & 'Valve Lubricant 501' (Low Temp 'Arctic' Service)

Features & Benefits

- Reduction in gate valve Leak Off Test (LOT) failures = Reduced intervention costs
- Maintained integrity of xmas tree gate valves = Maximised production
- Maintained integrity of valves acting as safety barriers during well intervention & workover = Increased safety & no requirement to hold grease crew at the rig site
- Reduced wear of valve components = Minimised spend on replacement parts
- Increased lubricant cavity retention = Reduced lubricant consumption
- Extended re-lubrication intervals = Reduced field maintenance costs
- Approved by major API 6A Original Equipment Manufacturers (OEM) = Independent assurance

Applications

Xmas Trees – Production & Injection
Choke & Kill and Standpipe Manifolds
BOP Kill Valves
Well Test Equipment
Frac Trees
Sand Control Equipment

Service Conditions

HT / HP
Low Temp (Arctic)
High H₂S
High CO₂
Acid Injection
High Sand Production

Support services

- Training seminar on gate valve integrity & maintenance, delivered on location
- Comprehensive library of field reports, user references and technical data
- Full range of lubricant pump & injection equipment, supplied to specific requirements
- Offices in the UK & Middle East, supported by a network of agents & stockists covering many parts of the world and expanding
